

# Assignment 0 Keystroke loggers

rwh

July 28, 2020

We're going to spend a lot of time looking at how to break cipher systems and mess with computers. That's hard work.

There is an easy alternative - use a keystroke logger and directly capture the (1)user's input.

## Instructions

1. Go online and find a hardware (e.g. not a program, but a physical object) keystroke logger for sale.
2. Take a screenshot showing the device and its web page (this is one of the few times a screenshot will be acceptable.)
3. Answer two questions: 1) Would you need anything other than a valid credit card (or other method of payment) and a shipping address to order the device, and 2) Would you notice the device if it were installed on your machine?

Turn in your answers and the screenshot.
